

Noman Amjad

Nationality: Pakistani **Date of birth:** 24/09/2002

Phone number: (+92) 3143834872

Email address: nomanamjad78600@gmail.com

WhatsApp Messenger: +923413540462

LinkedIn: [Noman Amjad](#)

Github: <https://github.com/780Noman>

Home: Saddar, 50701 Rawalpindi (Pakistan)

OBJECTIVE

An enthusiastic AI/ML Engineer with hands-on experience in NLP and ML life cycle, from data preprocessing to model training. Looking to join a dynamic team to help design, implement, and document scalable AI chatbot ML pipelines while growing as an AI professional.

WORK EXPERIENCE

Novel Intelligent Systems and Advanced Robotics (NISAR) Laboratory, (KUAS), Japan – Kyoto, Japan

City: Kyoto | Country: Japan

Research Intern – AI & Robotics

[10/2024 – 02/2025]

Researched **AI-driven robotics and autonomous systems**, focusing on **machine learning models, software optimization, and human-robot interaction** at NISAR Lab, KUAS, Kyoto, Japan. (<https://www.kuas.ac.jp/en/f-r/eng/sajid-nisar/>)

Octalooop Technologies – Islamabad, Pakistan

City: Islamabad | Country: Pakistan | Website: <https://www.octalooop.io/>

AI Developer Intern

[07/2024 – 09/2024]

Main Activities : Model Training, Data Preprocessing, Feature Engineering, Algorithm Selection, Performance Tuning, Collaboration, Documentation

EvoSoft Tech – Islamabad

City: Islamabad

ML Engineer Intern

[09/2024 – 10/2024]

Data Collection, Model Evaluation, Hyperparameter Optimization, Cross-Validation, Data Visualization

CodSoft

Python Developer Intern

[08/2022 – 10/2022]

Developing, testing debugging, integrate APIs, optimize performance

LANGUAGE SKILLS

Mother tongue(s): Urdu

Other language(s): English

EDUCATION AND TRAINING

Bachelor of Science in Computer Science (Specialization: Artificial Intelligence)

Pir Mehr Ali Shah Arid Agriculture University, Rawalpindi [09/2021 – 07/2025]

Address: 46300 Rawalpindi (Pakistan) | Final grade: 3.96/4.0

Higher Secondary School Certificate (HSSC) I.C.S

The Wings Groups of School and College , Daultala [2019 – 2021]

Address: 47330 Rawalpindi (Pakistan)

PROJECTS

-

->Emotion Detection and Recognition System : Developed an Emotion Detection System using CNN and transfer learning with models like ResNet and VGG16. Deployed the solution for real-time emotion classification with high accuracy.

Tech Stack: Python, TensorFlow, Keras, OpenCV,Django framework.

-> Real-Time License Plate Detection and Recognition System: Developed a comprehensive, end-to-end system to detect vehicle license plates and extract their registration numbers from images and real-time video. The project implements a two-stage process: first, using the YOLOv8 model for accurate plate detection, followed by an OCR engine to precisely extract the alphanumeric characters. An interactive Streamlit web application was built to demonstrate the system's capabilities.

Tech Stack: Python, YOLOv8, OCR , Streamlit, OpenCV, PyTorch

->Machine Learning Model for Credit Risk Assessment: Developed a robust machine learning system to predict credit risk levels for a financial institution. The project involved integrating and cleaning external bureau data with internal customer data, performing extensive EDA, and engineering new features using statistical tests (Chi-square, ANOVA). A multiclass classification model was trained and tuned to categorize applicants into different risk tiers, leading to a more scientific and data-driven lending strategy.

Tech Stack: Python, Pandas, NumPy, Scikit-learn, Matplotlib, Seaborn, SQL, Streamlit

-> Synapse: Dynamic Document Intelligence Engine: Engineered a multi-source conversational AI for deep dialogue with user-provided documents and dynamic web content scraped using Selenium. This tool leverages a sophisticated LangChain pipeline with Google's Gemini Pro for generative tasks and FAISS for efficient semantic retrieval. It delivers precise, verifiable answers with source citations and performs on-the-fly document analysis using SpaCy.

Tech Stack: Python, Streamlit, LangChain, Google Gemini Pro, FAISS, Selenium, SpaCy

->Intelligent Mobility System: Developed a self-driving car simulation in Python using Pygame and Deep Q-Learning (DDQN) and NEAT. Integrated obstacle detection, goal tracking, and real-time environment interaction through raycasting. Designed a reward-based navigation system with collision avoidance and visual feedback in a simulated track.

Tech Stack: Python, Pygame, TensorFlow/Keras, NumPy, Django, DDQN, NEAT

CERTIFICATIONS

ML specialization with Andrew Ng, Coursera

SKILLS AND TOOLS

Technical Skills

- **Programming Languages:** Python, C++
- **Libraries and Framework:** LangChain,NLTK,Pandas,numpy, TensorFlow, Keras, Scikit-learn, PyTorch
- **Web Development:** HTML, CSS, Django,Flask,Streamlit,Gradio
- **Database Management:** SQL, MongoDB,NoSQL
- **Version Control:** Git, GitHub
- **Cloud Platforms:** Hugging face spaces,strealit cloud,Azure
- **Other Tools:** Jupyter Notebook, Colab, Anaconda,VS code
